

Slow 'N Steady Tortoises

Getting started! Your Tortoise has arrived!

Congratulations on the arrival of your tortoise hatchling!

SNSTortoises desires that every hatchling we produce be raised into a healthy adult. The following instructions will help you and your tortoise start out well and potentially share many years together.

Upon Arrival: Place the baby in shallow luke warm water for about 15 minutes to ensure proper hydration. You can then offer it food, although don't be alarmed if it does not eat for a day or two. Please email and let us know it arrived safely!

Care Tips: Make sure the water dish is not a drowning hazard. The tortoise should be able to enter and exit easily, and it should be located away from objects/walls that could cause the tortoise to flip over.

I generally feed my tortoises in the evenings, as much as the tortoise likes to eat. This promotes a healthy active tortoise during the day as it searches for food!

Getting started: Feed almost daily. Mazuri Tortoise chow pellets should be soaked till soft and fed 1-2 times/week. Our website has a "Hatchling Care Sheet"

Growing your hatchling into a healthy Adult: Proper environment and nutrition is essential. Our website has a "Care Guide". Please read this carefully!
